Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA (Utilizes serialized .pkl models)
5	Environment configuration file (.env.example or similar)	NA
6	Deployed application URL (if hosted)	No
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA

8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```
hdi-prediction/
|
|— data/
|   └─ hdi_dataset.csv
|
|— models/
|   └─ hdi_model.pkl
|   └─ scaler.pkl
|   └─ label_encoder.pkl
|
|— templates/
|   └─ index.html
|   └─ result.html
|
|— static/
|   └─ style.css
|   └─ result.css
|
|— app.py
|— train.py
|— requirements.txt
└─ README.md
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	NA
Login Credentials (Demo)	NA
Platform / Hosting Provider	Localhost
Repository Link	https://github.com/Nikitha694/A-Comprehensive-Measure-of-Well-Being/tree/main/5. Project Development Phase/HDIPredictorproject
Demo Video Link	https://drive.google.com/file/d/1Kyfmh3GgUuex3swRIQ8MTyo9TyNapDcI/view?usp=drive_link

Step 4: Run Instructions Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites: Python 3.8 or higher, Git, and a stable internet connection.

Step 1: Clone the repository to your local machine

Step 2: Navigate into the project root directory using your terminal.

Step 3: Install all required Python dependencies: pip install -r requirements.txt

Step 4: Start the local Flask development server: python app.py

Step 5: Open your web browser and navigate to http://127.0.0.1:5000 to access the application.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Prediction accuracy depends on the quality of input data.	Use valid and realistic input values for better predictions.
2	Internet is required if the project is deployed on Render.	Run locally using Flask if internet is unavailable.
