

Solution Requirements

Date	28 June 2026
Team ID	
Project Name	A Comprehensive Measure of Well-Being
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	<i>Users can access the HDI Prediction System through the web application.</i>	Medium
2	Authorization levels	<i>Users are allowed to enter data and predict HDI values.</i>	Medium

3	External interfaces	<i>The system communicates with the Flask backend to process prediction requests.</i>	High
4	Transactions processing	<i>User input is sent to the ML model and the predicted HDI is returned.</i>	High
5	Reporting	<i>The system displays the predicted HDI score and HDI category on the screen.</i>	High
6	Business rules, etc.	<i>All input values must be valid before prediction is performed.</i>	High
7	Compliance to laws or regulations	<i>User input data is processed securely and not shared with others.</i>	Medium
8	<i>Other</i>	<i>The system provides a simple and user-friendly interface for prediction.</i>	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
------	--------------	-------------------------	-------------------------------------

1	Performance & Speed	<i>The system should generate predictions quickly.</i>	<i>Response within 2 seconds</i>
2	Scalability	<i>The system should support multiple users.</i>	<i>Supports multiple prediction requests efficiently.</i>
3	Security & Data Privacy	<i>User input should be transferred securely.</i>	<i>Input validation and secure processing of user data.</i>
4	Reliability & Availability	<i>The system should be available whenever users access it.</i>	<i>99% uptime</i>
5	Usability & Accessibility	<i>The interface should be simple and easy to use.</i>	<i>Easy navigation and responsive design</i>
6	Other	<i>The code should be easy to maintain and update.</i>	Modular and maintainable code
