

Project Initialization and Planning Phase

Date	27 June 2026
Team ID	
Project Name	A Comprehensive Measure of Well-Being
Maximum Marks	3 Marks

Define Problem Statements (Human Development Index Prediction System):

Many organizations, researchers, and policymakers rely on the Human Development Index (HDI) to evaluate a country's overall development. However, estimating HDI manually requires analyzing multiple indicators such as Life Expectancy, Mean Years of Schooling, Expected Years of Schooling, and Gross National Income (GNI) per capita. This process is time-consuming and may lead to calculation errors. The **Human Development Index Prediction System** uses Machine Learning to predict the HDI score based on these development indicators. It provides quick, accurate, and easy-to-understand predictions through a simple web application, helping users analyze development levels more efficiently.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But Because	Which makes me feel
PS-1	A researcher, student, or government analyst.	Predict the Human Development Index (HDI) of a country quickly.	Manual calculation requires analyzing multiple socio-economic indicators, which is time-consuming and may lead to errors.	Confused and frustrated while making development analysis.
